Focus: JVM Environment, Multiplatform & Generative AI

PROFESSIONAL PROFILE

Software developer specialized in Kotlin and the multiplatform ecosystem, with hands-on experience in Android applications and advanced generative AI integrations. I have designed and deployed multiplatform solutions leveraging Clean Architecture, integrating multi-provider LLMs (GPT-4, Claude, Gemini) and complex industrial automation workflows. Strongly focused on code quality, technical efficiency, and the delivery of robust and easily extensible software.

FEATURED PROJECTS

App Prototype Creator (Master's Thesis - Active Development)

Intelligent Multiplatform Prototyping Tool

2024 – 2025

- Designed and developed a desktop and mobile application capable of translating functional text descriptions into interactive user interfaces using conversational AI flows.
- Multi-Provider LLM Integration:** Engineered asynchronous gateways to connect with OpenAI GPT-4, Anthropic Claude 3.5, and Google Gemini Flash seamlessly.
- Technical Challenge (Dynamic Rendering):** Solved UI prototype rendering (HTML/CSS/JS) inside the Compose lifecycle for desktop environments by integrating JavaFX, Swing and CEF (Chromium Embedded Framework).
- Credential Security:** Implemented a secure local storage architecture utilizing Encrypted Shared Preferences on Android and Java Preferences API on Desktop.

Stack: Kotlin Multiplatform, Compose Multiplatform, Ktor, Koin, SQLDelight, Clean Architecture

Live Football App (Final Degree Project)

Native Android Application for Football Club Management

2024

- Native Android application designed to manage an amateur/local football club with team management, player tracking, and live match monitoring.
- Backend & Data Management:** Designed and implemented the persistence architecture using SQLiteOpenHelper, relational data modeling with 4 core tables (teams, players, footballMatch, users), and entity-specific CRUD methods.
- Application Features:** Role-based authentication system (Coach/Assistant), team and player management, match creation and editing, and live tracking with timer, scoreboard, and card management (yellow/red) with immediate SQLite persistence.

Stack: Java, Android SDK, SQLite (SQLiteOpenHelper), Gradle, Firebase Analytics, Firebase Crashlytics, JUnit, AndroidX

PROFESSIONAL EXPERIENCE

**Web Developer
(WordPress & PHP
Backend)**

Artimark

Llanera de Ranes, Valencia (Spain)

June 2024 – January 2025

- Website Architecture:** Actively participated in the structural design and full technical deployment from scratch of the company's new e-shop (artimark.es).
- Configuration Logic:** Developed and tested a custom product variation and management system, programming tailored business rules in PHP environments.
- QA & Payment Gateway:** Integrated, maintained, and stress-tested secure online payment gateways, ensuring proper encryption and seamless transactional flows.
- Performance & SEO:** Optimized server load times, semantic URL structures, metadata, and technical monitoring using web analytics tools.

Digital Content Creator

Sellent Festive Culture Association

Sellent, Valencia (Spain)

2016 – 2018

- Planned and deployed digital outreach campaigns across social platforms, achieving an estimated 60% increase in event visibility.
- Coordinated cultural and festive events, increasing net public attendance by 40% compared to previous periods.

EDUCATION

**Master's Degree in Generative
Artificial Intelligence &
Innovation**

EVOLVE (Advanced Specialized Training)

2025 (480h + Master's Thesis)

- Software engineering and design focused on autonomous agents and multi-agent infrastructures.
- Workflow automation modeling through the hybridization of custom code and industrial infrastructure in n8n and Make.
- Architecture, operational deployment, and cost/context optimization for corporate chatbots powered by LLMs.

**Higher Degree in Multiplatform Application
Development**

IFP Formación (Innovation in Vocational Training)

2021 – 2025

- Object-oriented software engineering focused on native mobile and desktop environments (Java, C#).
- Structuring robust web services through the creation and consumption of efficient REST APIs.
- Relational database modeling and normalization utilizing enterprise-grade MySQL engines.
